YOSO MOTION LINEAR GUIDE RAIL

linear guide rail

■ Introduction to Linear Guides

1-1-1 High Accuracy

LinearGuide has littlefriction,onlya small driving force is needed tomovethe load.Low frictionhelps thetemperature rising effect tostay low.Thus,the friction is decreased and theaccuracy canbe maintained fora long period thantradition slidesystem.

1-1-2 High Rigidity

The designofLinearGuide features anequal load rating inall directions that provide sufficientngidity load in all directions,self-aligning capability to absorbinstallation-error.Moreove,asuffidentpreload canbe achievedto increase rigidity and makesit suitable for any kindof installation.

1-1-3 Easy for Maintenance

Compared with high-skill required scrapping process of traditional slide system,the Linear Guidecan offer high precision even if the mountingsurface is machined by milling or grinding.Moreover,the interchangeability of Linear Guide gives a conveniencefor installation and future maintenance.

1-1-4 HighSpeed

LinearGuide block,rail and ball apply by contact pointof rolling system.Due to the characteristicoflowfriction,the required driving force is much lower than that in other systems,thus the powerconsumption is low.Moreover the temperature rising effect is lower even under high speedoperation.

1-1-5 Super mute

The linear slider moves rapidly,the friction coefficient is verysmall and the noise is very low.It is widelyusedinsemi conductor and medical industries.

1-2 Recognizing of Master Rail

Linear rails to be applied on the same plane are all marked with the same serial number,and "M" is marked at the end of serial numberfor indicating the master rail,shown as the figure below.Therference side of carriage is the surface where is ground to a specified accuracy.For normal grade

(N),it has no mark "M"on rail which means any one of rails with same serial numbercould be themaster rail.

Fig 1.02 Recognizing of MasterRail

Combined Use of Rail and Carriage

For combined use,the rail and carriage must have the same serial number.When reinstalling thecarriage back to the rail,make sure they have the same serial number and the reference side ofcarriage should be in accordance with that of rail.

■ Installation of Linear Guide

1-3 For Butt-joint Rail

Accuracy may deviate at joints when carriages pass the joint simultaneously. Therefore, the joints should be interlaced for avoiding such accuracy problem.

YG Series Heavy Load Ball Type

■ YG Series- Heavy Load Ball Type Linear Guideway

YG series linear guideways are designed with load capacity and rigidity higher than other similar products with circular-arc groove and structure optimization. It features equal load ratings in the radial, reverse radial and lateral directions, and self-aligning to absorb installation-error. Thus, YOSO YG series linear guideways can achieve a longlife with high speed, high accuracy and smooth linear motion.

2-1-1 Features of YG Series

(1) Self-aligning capability

By design, the circular-arc groove has contact points at 45 degrees. YG series can absorb most installation errors due to surface irregularities and provide smooth linear motion through the elastic deformation of rolling elements and the shift of contact points. Self-aligning capability, high accuracy and smooth operation can be obtained with an easy installation.

(2) Interchangeability

Because of precision dimensional control, the dimensional tolerance of YG series can be kept in a reasonable range. which means that any blocks and any rails in a specific series can be used together while maintaining dimensional tolerance. And a retainer is added to prevent the balls from falling out when the blocks are removed from the rail.

(3) High rigidity in all four directions

Because of precision dimensional control, the dimensional tolerance of YG series can be kept in a reasonable range. which means that any blocks and any rails in a specific series can be used together while maintaining dimensional tolerance. And a retainer is added to prevent the balls from falling out when the blocks are removed from the rail.

2-1-2 Construction of YG Series

- Rolling circulation system: Block, Rail, End Cap and Retainer
- Lubrication system: Grease Nipple and Piping Joint
- Dust protection system: End seal, Bottom Seal, Bolt Cap, Double Seals and Scraper

2-1-3 Model Number of YG Series

YG series guideways can be classified into non-interchangeable and interchangeable types. The sizes are identical. The only difference between the two types is that the interchangeable type of blocks and rails can be freely exchanged, and their accuracy can reach up to P class. The model number of YG series contains the size, type, accuracy class, preload class, etc.

2-1-4 Type

(1) Blocktypes

There're two types of blocks: flange and square. The flange type is suitable for heavy moment load application because of the lower assembly height and wider mounting surface

YOSO MOTION LINEAR GUIDE RAIL

YG Series Heavy Load Ball Type

2-1-6 Preload

(1) Definition

Each guide rail can be preloaded and oversized balls are used. Generally, linear guides leave a negative gap between the groove and the ball to increase rigidity and maintain high precision. The figure shows that when the load is multiplied by the preload, the rigidity is doubled and the deflection is reduced by half. It is recommended that the preload of models below YG20 should not be greater than ZA to avoid excessive preload affecting the life of the guide rail.

(2) Preload classes

YOSO offers three classes of standard preload for various applications and conditions.

Table 2-1-13 Preload classes

Class	Code	Preload	Condition	Condition
Light Preload	Z0	0-0.02C	Certain load direction, low impact, low precision required	Transportation devices, auto-packing machines, X-Y axis for general industrial machines, welding machines, welders
Medium Preload	ZA	0.05C-0.07C	High precision required	Machining centers, Z axis for general industrial machines, EDM, NC lathes, Precision X-Y tables, measuring equipment
Heavy Preload	ZB	0.10C-0.12C	High rigidity required, with vibration and impact	Machining centers, grinding machines, NC lathes, horizontal and vertical milling machines, Z axis of machine tools, Heavy cutting machines
Class	Interchangeable Guideway		Non-Interchangeable Guideway	
Preload classes	Z0, ZA		Z0, ZA, ZB	

Note: The "C" in the preload column denotes basic dynamic load rating.

(3) Stiffness performance

Stiffness depends on preload. The following table shows stiffness value of each size.

(3) Codes of ultra-high dust proof accessories

YOSO has developed high dust-resistant accessories for use in environments filled with dust and particles, such as wood-working machinery and glass/stone processing equipment. These accessories have high dust resistance. If you need an accessory, please add the code after the model number.

Note:

- 1.The available size for high dust proof accessories are YG15C,HG20(C/H),YG25(C/H),YG30(C/H),YG35(C/H),YG45(C/H)
- 2.The value of friction force will increase 1.5~4.0kgf.
- 3.MGN5 is only supplied with End Seal[Ultra-high dustproof]

(4) Function of dust proof accessories

- End seal and bottom seal

To prevent life reduction caused by iron chips or dust entering the block.

- Double seals

Enhances the wiping effect, foreign matter can be completely wiped off.

2-1-10 The Accuracy Tolerance of Mounting Surface

(1) The accuracy tolerance of rail-mounting surface

Because of the circular-arc contact design, the HG linear guideway can compensate for some surface-error on installation and still maintain smooth linear motion. As long as the accuracy requirements for the mounting surface are followed, high accuracy and rigidity of linear motion of the guideway can be obtained without any difficulty. For fast installation and smooth movement ability of the deviation in mounting surface accuracy.

(2) The parallelism tolerance of reference surface (P)

2-1-11 Cautions for Installation

(1) Shoulder heights and fillets

Improper shoulder height and radii on the mounting surface can cause accuracy deviations and interference with the rail or slide. Installation inaccuracies can be eliminated by following the recommended shoulder height and radii.

Table 2-1-24 Shoulder Heights and Fillets

Size	Max.radius of fillets	Max.radius of fillets	Shoulder height beside the rail	Shoulder height beside the rail	Clearance under block

YG65	1.5	1.5	10	10	15

(2) Tightening Torque of Bolts for Installation

Improper tightening of bolts will seriously influence the accuracy of Linear Guideway installation. The following tightening torques for different sizes of bolts are recommended.

2-1-12 Standard and Maximum Lengths of Rail

YOSO offers standard rail lengths for customer needs, For non-standard E-values, the recommended dimensions should not be greater than 1/2 of the pitch [P] dimension. This will prevent an unstable rail end.

$$L = (n-1) \times P + 2 \times E \quad \dots \dots \dots \text{Eq.2.1}$$

L: Total length of rail (mm)
 n: Number of mounting holes
 P: Distance between any two holes [mm]
 E: Distance from the center of the last hole to the edge (mm)

YOSO MOTION LINEAR GUIDE RAIL

YSR Series Low Profile Ball Type

■ YSR Series - Low Profile Ball Type Linear Guideway

2-2-1 Features of the YSR Series Linear Guideway

The design of the YSR series offers a low profile, high load capacity, and high rigidity, it also features an equal load rating in all four directions and self-aligning capability to absorb installation error, allowing for higher accuracies. Additionally, the lower assembly height and the shorter length make the YSR series more suitable for high-speed automation machines and applications where space is limited.

The retainer is designed to hold the balls in the block even when it is removed from the rail.

2-2-2 Construction of YSR Series

- Rolling circulation system: Block, rail, end cap and retainer
- Lubrication system: Grease nipple and piping Joint
- Dust protection system: End seal, bottom seal, cap and scraper

2-2-3 Model Number of YSR Series

YSR series linear guideways are classified into non-interchangeable and interchangeable types. The sizes of these two types are the same as one another. The main difference is that the interchangeable type of blocks and rails can be freely exchanged and they can maintain P-class accuracy. Because of strict dimensional control, the interchangeable type linear guideways are a wise choice for customers when rails do not need to be matched for an axis. The model number of the YSR series identifies the size, type, accuracy class, preload class, etc.

2-2-6 Preload

(1) Definition

A preload can be applied to each guideway. Generally, a linear motion guideway has a negative clearance between the groove and balls in order to improve stiffness and maintain high precision. The figure shows that adding a preload can improve stiffness of the linear guideway. A preload no greater than ZA would be recommended for model sizes smaller than YSR20. This will avoid an over-loaded condition that would affect guideway life.

(2) Preload classes

YOSO offers three standard preloads for various applications and conditions.

Table 2-2-8 Preload Classes

Class	Code	Preload	Condition
Very Light Preload	Z0	0~0.02C	Certain load direction, low impact, low precision required
Light Preload	ZA	0.03C~0.05C	low load and high precision required
Medium Preload	ZB	0.06C~0.08C	High rigidity required, with vibration and impact

Class	Interchangeable Guideway	Non-Interchangeable Guideway
Preload classes	Z0, ZA	Z0, ZA, ZB

Note: The C in the preload column denotes basic dynamic load rating.

(3) Stiffness performance

Stiffness depends on preload. The following table shows stiffness value of each size

2-2-7 Lubrication

(1) Grease

- Grease nipple

- Mounting location

The standard location of the grease fitting is at both ends of the block, the nipple may be mounted in the side or top of the block. For lateral installation, we recommend that the nipple be mounted to the non-reference side, otherwise please contact us. When lubricating from above, in the recess for the O-ring, a smaller, preformed recess can be found. Preheat the 0.8 mm diameter metal tip. Carefully open the small recess with the metal tip and pierce through it. Insert a round sealing ring into the recess. [The round sealing ring is not supplied with the block] Do not open the small recess with a drill bit this may introduce the danger of contamination. It is possible to carry out the lubrication by using the oil-piping joint.

Table 2-2-10 O-Ring size and max. permissible depth for piercing

Size	O-Ring		Lube hole at top: max. permissible depth for piercing

2-2-8 Dust Protection Equipment

(1) Codes of equipment

If the following equipment is needed, please indicate the code followed by the model number.

(2) End seal and bottom seal

Protects against contaminants entering the block. Reduces potential for groove damage resulting in a reduction of liferatings.

YSR35	1.96(0.2)

Note: 1. 1kgf=9.81N

2. Please inform YOSO if low friction request is required.

2-2-10 Mounting Surface Accuracy Tolerance

Because of the circular-arc contact design, the YSR linear guideway can withstand surface-error installation and deliver smooth linear motion. When the mounting surface meets the accuracy requirements of the installation, the high accuracy and rigidity of the guideway will be obtained without any difficulty. For faster installation and smoother movement, YOSO offers a preload with normal clearance because of its ability to absorb higher deviations in mounting surface inaccuracies.

2-2-11 Cautions for Installation

(1) Shoulder heights and chamfers

Improper shoulder heights and fillets of mounting surfaces will cause a deviation in accuracy and the interference with the rail or block. As long as the recommended shoulder heights and fillets are followed, installation inaccuracies should be eliminated.

Table 2-2-20 Shoulder Heights and chamfers

Size	Max.radius of fillets	Max.radius of fillets	Shoulder height beside the rail	Shoulder height beside the block	Clearance under block

YSR30	1.0	1.0	7.0	7.0	10.0
YSR35	1.0	1.0	7.5	9.5	11.0

(2) Tightening Torque of Bolts for installation

Improperly tightened mounting bolts will seriously affect the accuracy of linear guide installations. The following tightening torques for different sizes of bolts are recommended.

2-2-12 Standard and Maximum Lengths of Rail

YOSO offers a number of standard rail lengths. Standard rail lengths feature end mounting hole placements set to predetermined values (E). For non-standard rail lengths, be sure to specify the E-value to be no greater than 1/2 the pitch (P) dimension. An E-value greater than this will result in unstable rail ends.

$$L = (n-1) \times P + 2 \times E \quad \text{Eq.2.2}$$

L : Total length of rail (mm)

n : Number of mounting holes

P : Distance between any two holes (mm)

E : Distance from the center of the last hole to the edge (mm)

YEH Series Four-Row Wide Rail

■ YEH Series – Four-Row Wide Rail Linear Guideway

2-3-1 Features of the YEH Series Linear Guideway

The YE series features equal load ratings in the radial, reverse radial and the lateral direction with contact points at 45 degrees. This along with the wide rail, allows the guide way to be rated for high loads, moments and rigidity. By design, it has a self-aligning capacity that can absorb most installation errors and can meet high accuracy standards. The ability to use a single rail and to have the low profile with a low center of gravity is ideal where space is limited and/or high moments are required.

2-3-2 Construction of YEH Series

- Rolling circulation system: Block, rail, end cap and retainer
- Lubrication system: Grease nipple and piping Joint
- Dust protection system: End seal, bottom seal, cap and scraper

YEH Series Four-Row Wide Rail

2-3-3 Model Number of YEH Series

YEH series linear guideways are classified into non-interchangeable and interchangeable types. The sizes of these two types are the same as one another. The main difference is that the interchangeable type of blocks and rails can be freely exchanged and they can maintain P-class accuracy. Because of strict dimensional control, the interchangeable type linear guideways are a wise choice for customers when rails do not need to be matched for an axis. The model number of the YEH series identifies the size, type, accuracy class, preload class, etc.

2-3-6 Preload

(1) Definition

A preload can be applied to each guideway. Generally, a linear motion guideway has a negative clearance between the groove and balls in order to improve stiffness and maintain high precision. The figure shows that adding a preload can improve stiffness of the linear guideway.

(2) Preload classes

YOSO offers three standard preloads for various applications and conditions.

Table 2-3-6 Preload Classes

Class	Code	Preload	Condition
Very Light Preload	Z0	0~0.02C	Certain load direction, low impact, low precision required
Light Preload	ZA	0.03C~0.05C	low load and high precision required
Medium Preload	ZB	0.06C~0.08C	High rigidity required, with vibration and impact

Class	Interchangeable Guideway	Non-Interchangeable Guideway
Preload classes	Z0,ZA	Z0,ZA,ZB

Note: The C in the preload column denotes basic dynamic load rating.

(3) Stiffness performance

Stiffness depends on preload. The following table shows stiffness value of each size

● Mounting location

The standard location of the grease fitting is at both ends of the block, the nipple may be mounted in the side or top of the block. For lateral installation, we recommend that the nipple be mounted to the non-reference side, otherwise please contact us. When lubricating from above, in the recess for the O-ring, a smaller, preformed recess can be found. Preheat the 0.8 mm diameter metal tip. Carefully open the small recess with the metal tip and pierce through it. Insert a round sealing ring into the recess. (The round sealing ring is not supplied with the block) Do not open the small recess with a drill bit this may introduce the danger of contamination. It is possible to carry out the lubrication by using the oil-piping joint.

(2) End seal and bottom seal

Protects against contaminants entering the block. Reduces potential for groove damage resulting in a reduction of life ratings.

(3) Double seals

Removes foreign matter from the rail preventing contaminants from entering the block.

2-3-10 Mounting Surface Accuracy Tolerance

Because of the circular-arc contact design, the YE linear guideway can withstand surface-error installation and deliver smooth linear motion. When the mounting surface meets the accuracy requirements of the installation, the high accuracy and rigidity of the guideway will be obtained without any difficulty. For faster installation and smoother movement, YOSO offers a preload with normal clearance because of its ability to absorb higher deviations in mounting surface inaccuracies.

2-3-11 Cautions for Installation

(1) Shoulder heights and chamfers

Improper shoulder heights and fillets of mounting surfaces will cause a deviation in accuracy and the interference with the rail or block. As long as the recommended shoulder heights and fillets are followed, installation inaccuracies should be eliminated.

Table 2-3-18 Shoulder Heights and Chamfers

Size	Max.radius of fillets	Max.radius of fillets	Shoulder height beside the rail	Shoulder height beside the block	Clearance under block

YEH35	0.5	0.5	3.5	10.0	4.0
YEH50	0.8	0.8	6.0	10.0	7.5

(2) Tightening Torque of Bolts for Installation

Improperly tightened mounting bolts will seriously affect the accuracy of linear guide installations. The following tightening torques for different sizes of bolts are recommended.

YEH Series Four-Row Wide Rail

2-3-12 Standard and Maximum Lengths of Rail

YOSO offers a number of standard rail lengths. Standard rail lengths feature end mounting hole placements set to predetermined values (E). For non-standard rail lengths, be sure to specify the E-value to be no greater than 1/2 the pitch (P) dimension. An E-value greater than this will result in unstable rail ends.

$$L = (n - 1) \times P + 2 \times E \quad \dots \dots \dots \text{Eq.2.3}$$

- L : Total length of rail (mm)
- n : Number of mounting holes
- P : Distance between any two holes (mm)
- E : Distance from the center of the last hole to the edge (mm)

YSS Series Miniature Type

■ YSS Series-Miniature Linear Guideway

2-4-1 Features of YSS Series

Design features of narrow type miniature guideways- YSS:

1. Tiny and light weight, suitable for miniature equipment.
2. Gothic arch contact design can sustain loads from all directions and offer high rigidity and high accuracy.
3. Specification with ball retainers would avoid ball falling when the blocks are removed from rails.
4. Interchangeable types are available in certain sizes and precision grades.

2-4-2 Construction of MGN Series

- Rolling circulation system: Block, rail, ball, end cap and retainer (except size 2, 3)
- Lubrication system: Grease nipple is available for YSS15, lubricated by grease gun. YSS7,9, 12 are lubricated by the hole at the side of the end cap.
- Dust protection system: End seal, bottom seal, cap and scraper

YSS Series Miniature Type

2-4-3 Features of YSS Series

Design features of wide type miniature guideways- YSS:

1. The enlarged width design increases the capacity of moment loading.
2. Gothic arch contact design has high rigidity characteristic in all directions.
3. Specification with ball retainers would avoid ball falling when the blocks are removed from rails.
4. Interchangeable types are available in certain sizes and precision grades.

2-4-4 Construction of YSS Series

- Rolling circulation system: Block, rail, ball, end cap and retainer (except size 2)
- Lubrication system: Grease nipple is available for YSS14, 15, lubricated by grease gun.
- YSS3, 7, 9, 12 are lubricated by the hole at the side of the end cap.
- Dust protection system: End seal (except size 2), bottom seal optional size 9,12,14,15, cap (size 12,14,15)

YOSO MOTION LINEAR GUIDE RAIL

YSS Series Miniature Type

2-4-5 Features of MGN-0 Series

Design features of narrow type miniature guideways-YSS-0:

1. Reduce 20% weight of block by using resin in the recirculation unit. The compact size and light weight is suitable for miniaturized machinery.
2. Gothic arch contact design can sustain loads from all directions and offer high rigidity and high accuracy.
3. Interchangeable types are available in certain precision grades.
4. The design of resin recirculation unit which is able to eliminate the collision with the metal block.
5. Integrated design for recirculation system.

2-4-6 Construction of YSS-0 Series

- Rolling circulation system: Block, rail, ball, end cap and retainer
- Lubrication system: Grease nipple is available for YSS15-0, lubricated by grease gun.
- YSS5-0, YSS7-0, YSS9-0, YSS12-0 are lubricated by the hole at the side of the end cap Dust
- protection system: End seal, bottom seal optional (size 9, 12, 15), cap (size 12, 15)

YSS Series Miniature Type

2-4-7 Features of YSS-0 Series

Design features of wide type miniature guideways-MGW-0:

1. The enlarged width design increases the capacity of moment loading.
2. Gothic arch contact design has high rigidity characteristic in all directions.
3. Steel balls are held by a miniature retainer to keep balls from falling out, even when the blocks are removed from the rail.
4. Integrated design for recirculation system, which reduce 20% weight of block by using resin in the recirculation unit.

2-4-8 Construction of YSS-0 Series

- Rolling circulation system: Block, rail, ball, end cap and retainer
- Lubrication system: Grease nipple is available for YSS15-0, lubricated by grease gun. YSS5-0, YSS7-0, YSS9-0, YSS12-0 are lubricated by the hole at the side of the end cap.
- Dust protection system: End seal, bottom seal (optional) (size 9, 12, 15), cap (size 12, 15)

2-4-9 Application

YSS series can be used in various applications, such as semiconductor equipment, PCB AC equipment, medical, robotics, measuring equipment, automation equipment, and other miniature sliding machinery.

YOSO MOTION LINEAR GUIDE RAIL

YSS Series Miniature Type

2-4-10 Model Number of YSS Series

YSS Series linear guideway can be classified into non-interchangeable and interchangeable types, which are the same size. The interchangeable type is more convenient due to replaceable rails; however, the precision is less than non-interchangeable type. With strict dimension and quality control, the interchangeable type linear guideways are a suitable choice for customers when rails don't need to be paired. The model number contains information for the size, type, accuracy, preload, and so on.

(1) Non-interchangeable type

Perform joint treatment when required lengths exceed 1300. Please contact TB! MOTON for detailed information.

2-4-12 Accuracy Classes

The accuracy of YSS series can be classified into three classes: normal (C), high (H), precision (P). Choices for different accuracy classes are available according to various requirements.

(1) Accuracy of non-interchangeable guideways

Table 2-4-3 Accuracy Standard of Non-interchangeable Type

Accuracy Classes	Normal (C)	High (H)	Precision (P)

Note: "C" in column preload means basic dynamic load rating.

● Stiffness performance

Stiffness depends on preload. The following table shows stiffness value of each size.

2-4-14 Dust Proof Accessories

End seals on both sides of the block can prevent dust from entering the block and maintain the accuracy and servicelife of a linear guideway. End seals for YSS3MS are optional, customers can order it by adding the mark "+SS" followed by the model number. For other size of YSS series, end seals are standard accessories. Bottom seals are fixed under the skirt portion of the block to prevent dust from entering. Customers can order bottom seals by adding the mark "+U" followed by the model number. Sizes 9, 12, 14 and 15 provide bottom seals as an option, but size 2, 3, 5, 7 do not offer the option due to the space limit of H₁. Note that "H₁" would be reduced if bottom seals are attached, be aware of possible interference between block and mounting surface.

2-4-16 Cautions for Installation

(1) Shoulder heights and fillets

Improper shoulder heights and fillets of mounting surfaces will cause a deviation in accuracy and the interference with the rail or block. As long as the recommended shoulder heights and fillets are followed, installation inaccuracies should be eliminated.

Table 2-4-13 Shoulder Heights and Fillets

YSS Series Miniature Type

2-4-17 Standard and Maximum Lengths of Rail

YOSO offers standard lengths of rail for fast shipping. For non-standard rail lengths, it's recommended that the E value is no greater than 1/2 of the pitch (P) to prevent instability at the end of the rail, and the E value should be no less than E-min to avoid a broken mounting hole.

$$L = (n - 1) \times P + 2 \times E \quad \text{Eq.2.4}$$

- L : Total length of rail (mm)
- n : Number of mounting holes
- P : Distance between any two holes (mm)
- E : Distance from the center of the last hole to the edge (mm)

Note: 1. Tolerance of E value for standard rail is 0.5--0.5 mm. Tolerance of E value for jointed rail is 0--0.3 mm.

2. Maximum standard length indicates the max. rail length with standard E value on both sides.

3. Fixing screws for YSSM5s mounting holes are appended.

4. If smaller E value is needed, please contact YOSO.

5. YSSW14 is only supplied with carbon steel.

6. YSSM2, YSSM3, YSSW3, YSSM5, YSSW5 are only supplied with stainless steel.

7. YSSM9 of stainless steel is supplied with the maximum length of 1200mm; MGNR9 of carbon steel is supplied with the maximum length of 1000mm.

8. YSSW7 of stainless steel is supplied with the maximum length of 600mm; YSSW7 of carbon steel is supplied with the maximum length of 2000mm.

YSS Series Miniature Type

2-4-18 EL Auxiliary Lubrication Module

The EL Auxiliary Lubrication Module is an environment friendly lubrication system that can extend the maintenance life of YOSO and quideways up to 10,000 km. The module is installed on either end of a quideway block and provides extended lubrication through a no-drip encapsulated material for a cleaner environmental solution.

(1) Feature

1. Extend maintenance period up to 10,000km
2. Contained lubrication fluid prevents spills
3. Direct lubrication in ball rolling raceway,
4. Compatible with most YOSO guideways.
5. Conform to cleanroom class 1000 regulation.

Notes :

1. Service life will vary from application environment, lubrication conditions, and assembly accuracy.
2. Not for use in high heat conditions greater than 50°C ,and if lower than 25°C please contact YOSO.
3. Standard parts must be pregreased with YOSO G05. If there is no pregreasing, the maintenance mileage will be shortened.

(2) Applications

Broadly applicable in automation, conveying equipment, industrial machine, Semi-conductor, and inspection machine.

(3) Lubrication Capability

- High speed life testing with light load

Test Specification	YSS9WS1R1000Z0CM+EL
Velocity	5m/s
Acceleration	50 m/s ²
Applied Load	0.2 kgf
Stroke	850 mm

PGH Steel Strip Linear Guide

2-5-1 The Structure of PGH-series

- Rolling circulation system: Block, rail, ball, end cap and retainer
- Lubrication system: Grease Nipple and Piping Joint
- Dust protection system: End seal, Bottom Seal, Bolt Cap, Metal scraper

YOSO offers standard rail lengths for customer needs. For non-standard E-values, the recommended dimension should not be greater than 1/2 of the pitch (P) dimension. This will prevent an unstable rail end.

$$L = (n - 1) \times P + 2 \times E \quad \text{Eq.2.1}$$

L : Total length of rail (mm)

P : Distance between any two holes (mm)

n : Number of mounting holes

E : Distance from the center of the last hole to the edge (mm)

PGH Steel Strip Linear Guide

2-5-2 Nominal Model Code of PGH Type

PGH Series can be classified into interchangeable and non-interchangeable types. The sizes are identical; the only difference between the two types is that the accuracy of non-interchangeable types could reach up to UP grades since YOSO MOTION makes the linear guide set under strict international regulation. Interchangeable blocks and rails can be freely exchanged, however, the accuracy could be up to H grade only due to technical issues. It is much more convenient for customers who do not need linear guides with high accuracy to have interchangeable blocks and rails.

Non-interchangeable Type code:

YGG Series -High Rigidity RollerType Linear Guideway

2-6-1 Advantages and features

The new YGG series from YOSO features a roller as the rolling element instead of steel balls. The roller series offers superior high rigidity and very high load capacities. The YGG series is designed with a 45-degree angle of contact. Elastic deformation of the linear contact surface, during load, is greatly reduced thereby offering greater rigidity and higher load capacities in all 4 load directions. The YGG series linear guideway offers high performance for high-precision manufacturing and achieving longer service life.

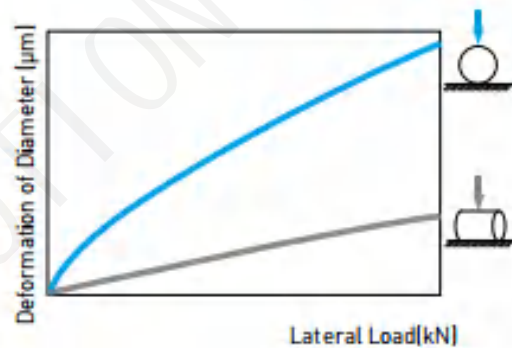

(1) Optimal design

FEM analysis was performed to determine the optimal structure of the block and the rail. The unique design of the circulation path allows the YGG series linear guideway to offer smoother linear motion.

(2) Super high rigidity

The YGG series is a type of linear guideway that uses rollers as the rolling elements. Rollers have a greater contact area than balls so that the roller guideway features higher load capacity and greater rigidity. The figure shows the rigidity of a roller and a ball with equal volume.

(3) Super high load capacity

With the four rows of rollers arranged at a contact angle of 45 degrees, the YGG series linear guideway has equal load ratings in the radial, reverse radial and lateral directions. The YGG series has a higher load capacity in a smaller size than conventional, ball-type linear guideways.

(4) Operating life increased

Compare with the ball element, the contact pressure of the rolling element is distributed on the line region. Therefore, stress concentration was reduced significantly and the YGG series offers longer running life. The nominal life of the YGG series can be calculated by using Eq.

The acting load will affect the nominal life of a linear guideway. Based on the selected basic dynamic rated load and the actual load. The nominal life of ball type and roller type linear guideway can be calculated by Eq. 2.5 respectively.

$$L = \left(\frac{C}{P} \right)^{\frac{10}{3}} \cdot 100 \text{ km} = \left(\frac{C}{P} \right)^{\frac{10}{3}} \cdot 62 \text{ mile} \quad \text{Eq. 2.5}$$

If the environmental factors are taken into consideration, the nominal life is influenced greatly by the motion conditions, the hardness of the raceway, and the temperature of the linear guideway. The relationship between the factors is expressed in Eq. 2.6.

$$L = \left(\frac{f_h \cdot f_t \cdot C}{f_w \cdot P} \right)^{\frac{10}{3}} \cdot 100 \text{ km} = \left(\frac{f_h \cdot f_t \cdot C}{f_w \cdot P} \right)^{\frac{10}{3}} \cdot 62 \text{ mile} \quad \text{Eq. 2.6}$$

2-6-3 Model Number of YGG series

YGG series linear guideways are classified into non-interchangeable and interchangeable types. The sizes of these two types are the same as one another. The main difference is that the interchangeable type of blocks and rails can be freely exchanged and they can maintain P-class accuracy. Because of strict dimensional control, the interchangeable type linear guideways are a wise choice for customers when rails do not need to be matched for an axis. The model number of the YGG series identifies the size, type, accuracy class, preload class, etc.

2-6-4 Advantages and features

(1) Block types

YOSO offers two types of guide blocks, flange and square type. Because of the low assembly height and large mounting surface, the flange type is excellent for heavy moment load applications.

2-6-5 Accuracy Classes

The accuracy of the YGG series can be classified into four classes: high (H), precision (P), super precision (SP) and ultra precision (UP). Customers may choose the class by referencing the accuracy requirements of the applied equipment.

2-6-6 Preload

A preload can be applied to each guideway using oversized rollers. Generally, a linear motion guideway has negative-clearance between the raceway and rollers to improve stiffness and maintain high precision. The YGG series lineal guideway offers three standard preloads for various applications and conditions.

Table 2-6-13

Class	Code	Preload	Condition
Light Preload	Z0	0.02C-0.04C	Certain load direction, low impact, low precision required
Medium Preload	ZA	0.07C-0.09C	High rigidity required, high precision required
Heavy Preload	ZB	0.12C-0.14C	Super high rigidity required, with vibration and impact

The figure shows the relationship between the rigidity, friction and nominal life. A preload no larger than ZA would be recommended for smaller model sizes to avoid over-preload affecting the life of the guideway.

● Stiffness performance

Stiffness depends on preload. The following table shows stiffness value of each size.

2-6-11 Cautions for Installation

(1) Shoulder heights and fillets

Improper shoulder heights and fillets of mounting surfaces will cause a deviation in accuracy and the interference with the rail or block. As long as the recommended shoulder heights and fillets are followed, installation inaccuracies should be eliminated.

SE Type-Metal End Cap Linear Guideway

2-7-1 General Information

(1) Features

- Use of Metallic parts; (if end seal is needed, the high-temperature rubber in end seal is available)
- Excellent temperature resistance; service temperature under 150°C.

(2) Applications

- Heat treatment equipment,
- Applications using vacuums (no vapor dispersion from plastic or rubber)
- Welding equipment.

YOSO MOTION LINEAR GUIDE RAIL

Stainless Steel Linear Guideway

2-8-1 Features

- (1) Same features as standard linear guideway
 - Stiffness, Hardness, Service Life, Dimensions remain the same
- (2) Suitable for specific extreme environments
 - With metal components, it can be used in low and medium vacuum environments
- (3) Great corrosion resistance
 - Block, Rail, Steel Balls, Grease nipple, Screws are all made of stainless steel material

Note:

1. Currently available in YGH20C, YGH25C, YGH25R, YSR25C
2. Maximum length available is 2000mm
3. Add "/M" after the specification of linear guideway
Ex: YGH25CA2R1600ZAPI /M

2-8-2 Suitable for below environments

- Chemicals
- Humid

2-8-3 Main Applications

- Food processing, transportation and storage
- Liquid and gas processing equipment
- Vacuum equipment
- Cleanroom equipment

YOSO MOTION LINEAR GUIDE RAIL

YS-CSR LM GUIDE CROSS LM GUIDE MODEL

2-9-1 Structure and Features

Balls roll in four rows of raceways precision-ground on a LM rail and a LM block, and endplates incorporated in the LM block allow the balls to circulate. Since retainer plates hold the balls, they do not fall off even if the LM rail is pulled out. This is an integrated LM Guide that combines two LM rails, which have the same internal structure as the successful and established Model YGH, that intersect each other back to back. It is machined with high precision so that the hexahedral perpendicularity of the LM block is within 2µm per 100mm. The two rails are also machined with high precision in relative straightness. As a result, extremely high accuracy in orthogonality is achieved. Since an orthogonal LM system can be achieved with the Model YS-CSR alone, a conventionally required saddle is no longer necessary. This enables the structure for X-Y motion to be simplified, and the whole system can be downsized.

4-way Equal Load

Each row of balls is placed at a contact angle of 45° so that the rated loads applied to the LM block are uniform in the four directions (radial, reverse radial and lateral directions), enabling the LM Guide to be used in all orientations.

High Rigidity

Since balls are arranged in four rows in a well-balanced manner, this model is stiff against a moment, and smooth straight motion is ensured even a preload is applied to increase the rigidity.

The rigidity of the LM blocks is 50% higher than that of a combination of two YGH LM blocks secured together back-to-back with bolts. Thus, YS-CSR is an optimal LM Guide for building an X-Y table that requires high rigidity.

2-9-2 Types and Features

Model YS-CSR-S

This model is a standard type.

Specification Table

Model YS-CSR-S

It has a longer overall LM block length (L) and a greater rated load.

Specification Table

YS-CSR LM GUIDE CROSS LM GUIDE MODEL

2-9-3 Using an inner Saddle

The Model YS-CSR can easily be assembled and adjusted by using an inner saddle to link four LM blocks together. When installed on an inner saddle, the Model YS-CSR becomes a highly accurate X-Y guide and achieves high rigidity moment in the yawing direction (as indicated by the arrow in the figure).

2-9-5 Standard Length and Maximum Length of the LM Rail

Table1 shows the standard lengths and the maximum lengths of model YS-CSR variations. For special rail lengths, it is recommended to use a value corresponding to the G,g dimension from the table. As the G,g dimension increases, this portion becomes less stable, and the accuracy performance is severely impacted.
